

Research tools for studying **POST TRANSLATIONAL MODIFICATIONS**

Phosphorylation / Glycosylation / Methylation / Acetylation / Nitration / Hydroxylation / Proteolytic Cleavage / Carbonylation

RayBiotech offers products and full testing services for high throughput analyses of PTMs. These products include ELISAs, Antibody Arrays, and Functional Assays.

Featured PTM Products

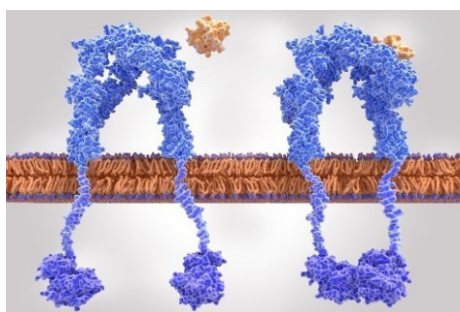

Phosphorylation Pathway Profiling Array C55

Simultaneously detects 55 phosphorylated human proteins in the MAPK, AKT, JAK/STAT, NFκB, and TGFβ signaling pathways.

Receptor Tyrosine Kinase (RTK) Phosphorylation Array

Simultaneously detects 71 phosphorylated human receptor tyrosine kinase proteins.

Human Glycosylation Array 1000

Simultaneously detects the glycosylation profile of 1,000 human proteins.
