

*Do Better Science with Abbexa: Your Partner in Research*

Abbexa provides high-quality reagents and services to accelerate life science, pharmaceutical, and biotechnology research. Our products, cited in over 2,000 articles, are trusted by scientists worldwide.

- **Antibodies:** Primary & Secondary Antibodies for various applications (WB, ELISA, IHC, IF).
- **Proteins & Peptides:** High-quality proteins and custom peptide services.
- **ELISA Kits:** Optimized kits delivering reproducible results in as little as 2 hours with superior sensitivity.

### Optimized ELISA Kits for Reproducible Results

ELISA and CLIA kits are designed for superior sensitivity, detecting as little as 5pg/ml in some kits. A wide range of ELISA kits, including cell-based and low sample volume options, are offered.

- Human Asprosin ELISA Kit
- Mouse D-Dimer ELISA Kit
- Mouse Asprosin ELISA Kit

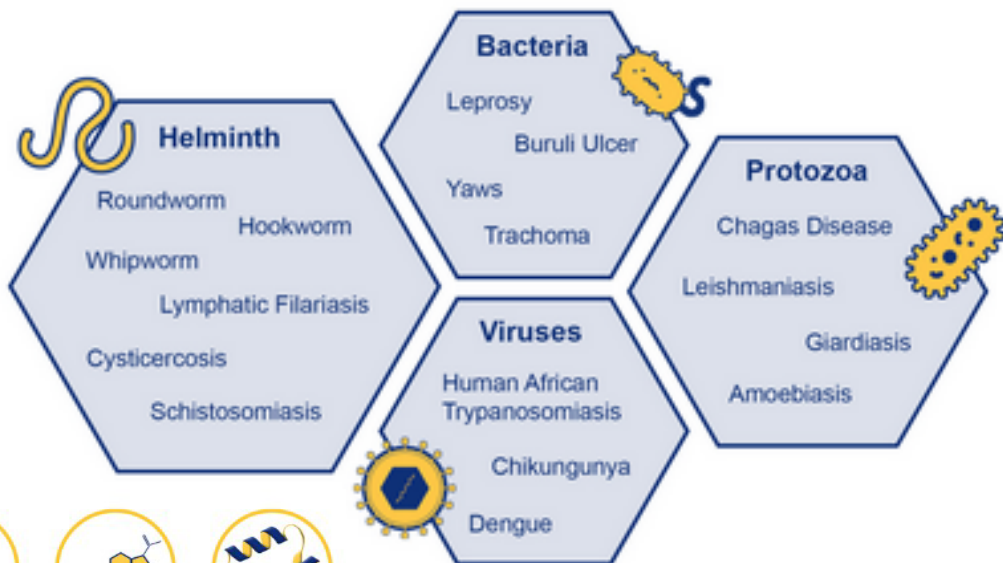

#### Key Benefits:

- Reproducible, reliable results in just 2 hours
- High sensitivity for low concentration detection
- Follow-up support to ensure consistent results

### The Global Burden of Overlooked Infections

Over 1.7 billion people are at risk of Neglected Tropical Diseases (NTDs), yet these infections remain underfunded and overshadowed by high-profile diseases like malaria and HIV/AIDS. NTDs cause chronic illness, disability, and social stigma, trapping communities in cycles of poverty.

At Abbexa, we support research efforts by providing high-quality reagents to study these diseases at the molecular level. From leprosy and trachoma to Chagas disease and dengue, our products help researchers advance diagnostics and treatments.
